

LED Grow Lights in a Commercial Cannabis Operation Heliospectra and Pink House Blooms

Are you ready to have your own LX601C LED Grow Light?

Pinkhouse Blooms, a Denver-based cannabis grow operation and dispensary has been using Heliospectra's LED Grow Lights to produce healthier, happier plants at less cost than their competition that uses standard HID lamps.

See the video on the product page for each lamp.

[Pinkhouse Blooms \(http://pinkhouse.me/\)](http://pinkhouse.me/), a Denver-based cannabis grow operation and dispensary has been using Heliospectra's [LED Grow Lights](http://growlightsource.com) growlightsource.com to produce healthier, happier plants at less cost than their competition that uses standard HID lamps. The head grower, Ryan Wankel, walks us through their experience in shifting from the inefficient technology to a lamp that provides more control, produces less heat and results in the same yields - overall this shift has reduced their cost of goods and produced a higher quality product for the operation.

If you have a large operation and you would like to find out how LED Lights can improve your growth facility, you can Contact grow.light.order@gmail.com
